DATE MAILED: 12/04/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	10/697,593	KELLEY, BRIAN HAROLD	
	Examiner	Art Unit	
	Aurangzeb Hassan	2182	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 27 August 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 2-8, 11-13, 15, 18-22, 29-33, 35 and 36 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 2-8, 11-13, 15, 18-22, 29-33, 35 and 36 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/27/2006 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 2 – 8, 11 – 13, 15, 18 – 22, 29 – 33, 35 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Walters et al. (US Patent Number 6,914,695 hereinafter "Walters") in view of Rathbone (Windows XP, hereinafter "Rathbone") further in view of Sony Corporation, PC Connecting Kit (Sony Corporation, PC Connecting Kit, 1997 hereinafter "Sony").

Art Unit: 2182

4. As per claims 29, 33, 35 and 36, Walters teaches a medium, system, method and device comprising:

- a peripheral device (digital camera, element 11, figure 2);

- a wireless device comprising (IBM ThinkPad, element 10, figure 2) ;

- a computer platform (element 10, figure 2 runs Windows OS, column 2, lines 27 – 32), said computer platform comprising:

 - a plurality of resident programs, each resident program respectively associated with a communication protocol (column 5, lines 18 – 21); and

 - an operating system (Windows, column 2, lines 27 – 32) for managing resources of said wireless devices and for controlling an interaction of the wireless device said peripheral device;

wherein

- said peripheral device selectively communicates with said wireless device using a specific communication protocol (Bluetooth, column 5, lines 18 – 21), and

- upon said peripheral device communicating with said wireless device, said operating system identifies (device ID, figure 8) a selected resident program associated with said specific communication protocol and links said selected resident program with said peripheral device (column 13, lines 6 – 9), and

 - said operating system identifies said selected resident program by:

 - attempting to identify said peripheral device (figure 3) and

if successfully identified, mapping from the successfully identified peripheral device to a corresponding one of said resident programs (HTML interface, column 13, lines 13 – 52).

Walters does not explicitly disclose mapping protocol when the peripheral is not successfully identified ^{to} and the corresponding resident program.

Rathbone explains the operating system Windows XP disclosing a method of successful identification of a peripheral (operating system Windows XP detects cameras when first plugged in, page 296 "Scanners and cameras") and if not successfully identified, prompt for installation of peripheral device connected according to a communication protocol specified by said peripheral (if camera isn't automatically accepted Windows XP connects to the peripheral and directs to installation and thereafter resident programs are ready for use)

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to understand the operating system utilized on the wireless device and modify Walters with the above teachings of Rathbone. One of ordinary skill in the art would be motivated to make such modification in order to better understand Windows XP functionality.

The combination of Walters and Rathbone does not explicitly disclose the installation software to complete installation allowing the peripheral device to be mapped to the resident program of Walters.

Sony teaches a method of mapping from a communication protocol specified by said peripheral device (Sony teaches both wired, pages 13 – 17, and wireless, pages 18

Art Unit: 2182

– 22, communication protocol specified by the peripheral device and supports a resident program “Sony Digital Still Camera Album Utility”, page 23).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to refer to the user manual of the peripheral device used in Walters and modify the combination of Walter's and Rathbone with the above teachings of Sony. One of ordinary skill would make such modifications in order to benefit from the capabilities of a camera when connected to a computer (page 3).

5. As per claims 2, 11, 18, and 30, Walters teaches a system, method, device, and medium wherein, the peripheral device communicates with the wireless device through a wired connection (cable connection, column 6, lines 32 – 43, USB Serial, column 2, lines 43 – 45).

The examiner cites two wired connectivity options taught by Walters.

6. As per claims 3, 12, and 19, Walters teaches a system, method, and device wherein, the peripheral device communicates with the wireless device through a wireless connection (Bluetooth, column 6, lines 32 – 47, infrared, column 2, lines 41 – 43).

The examiner cites two wireless connectivity options taught by Walters.

Art Unit: 2182

7. As per claims 4, 13, 20, and 31, Walters teaches a system, method, device, and medium wherein said attempting to identify comprises the peripheral device sending a class identifier (registered camera ID, column 8, lines 16 – 19) to the operating system of the wireless device and said successfully identified comprises the operating system determining the type of the peripheral device and selecting a resident program corresponding to an appropriate handler for that peripheral device based upon the class identifier (column 8, lines 11 – 51).

8. As per claims 5, 21, and 32, Walters teaches a system, device, and medium wherein said attempting to identify comprises the peripheral device sending a specific identifier (ID, column 8, lines 16 – 19) to the operating system of the wireless device and said successfully identified comprises the operating system determining the type of the peripheral device and selecting a resident program (column 8, lines 11 – 51) corresponding to an appropriate handler for that peripheral device based upon the specific identifier (column 8, lines 64 – 67, column 9, lines 1 – 23).

9. As per claims 6, 15, and 22, Walters teaches a system, method and device wherein the peripheral uses the wireless device as a communication portal to the Internet (column 11, lines 14 – 19).

Art Unit: 2182

10. As per claim 7, Walters teaches a system wherein, the peripheral device uses the wireless device as a communication portal over a telephone network (element 205, figure 4, column 9, lines 3 – 6).

11. As per claim 8, Walters teaches a system wherein, the peripheral device communicates with the computer platform of the wireless device through the communication portal of the computer platform (Bluetooth, column 5, lines 18 – 21).

Response to Arguments

12. Applicant's arguments with respect to claims 2 – 8, 11 – 13, 15, 18 – 22, 29 – 33, 35 and 36 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

13. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aurangzeb Hassan whose telephone number is (571)272-8625. The examiner can normally be reached on Monday - Friday 9 AM to 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim Huynh can be reached on (571)272-4147. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2182

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
